21. —No significant change was noted in most sperm parameters, but a significant improvement was noted in fertilization rates, from a mean of 10.3±10.5% in their previous cycles, to 26.3±22.8% after CoQ10 (P<0.05). In conclusion, the administration of CoQ10 may result in improvement in sperm functions in selective patients. Further investigation into the mechanisms related to these effects is needed.---
